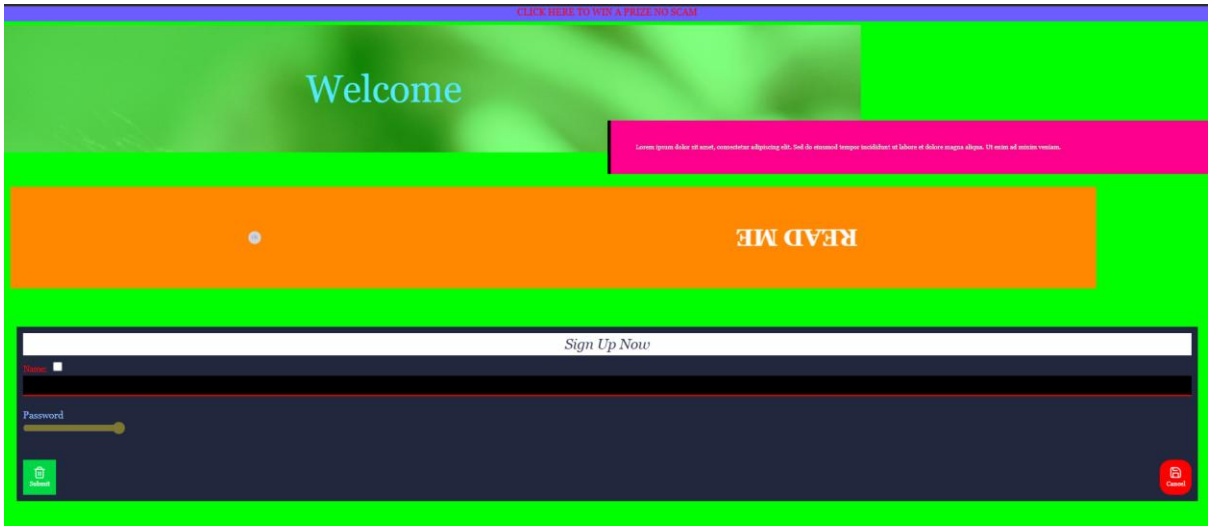
BAD DESIGN



WHY THIS IS A BAD DESIGN:

1. Terrible Colour Choices & No Harmony

- Neon green, bright orange, hot pink, dark blue, purple, and red are all used together
- No consistent colour palette
- Extremely high saturation causes eye strain
- Text often blends into the background → poor readability

  Violates: Colour harmony & contrast principles

2. No Visual Hierarchy

- Everything screams for attention at the same time
- “Welcome”, random banners, upside-down text, and form fields all compete
- User doesn’t know:
  - What to read first
  - What action to take
  - What the page is even for

  Violates: Visual hierarchy & focus

3. Confusing & Misaligned Layout

- Elements are placed randomly with no grid
- Large empty spaces mixed with overcrowded sections
- Content overlaps and floats without structure
- The orange section is rotated / flipped text (“READ ME”) — unreadable

Violates: Alignment, grid system, consistency

4. Poor Typography

- Multiple font styles and sizes used without purpose
- Upside-down text breaks readability
- Small text on bright backgrounds is hard to read
- No clear heading vs body text distinction
  Violates: Typography hierarchy & readability

5. Accessibility Is Ignored

- Low contrast text (pink on green, light blue on green)
- Colour-only indicators (red line, green buttons)
- No proper labels for inputs
- Slider used for password (huge UX fail)
  Violates: Accessibility (WCAG), inclusive design

6. Misleading & Untrustworthy Content

- Banner saying "CLICK HERE TO WIN A PRIZE NO SCAM"
- This instantly reduces credibility
- Users associate this with spam or phishing sites
  Violates: Trust & credibility principles

7. Broken Form UX

- "Name" field is unclear
- Password slider makes no sense
- Submit and Cancel buttons are far apart with different styles
- Icons without explanation
  Violates: Form usability & interaction design

8. Inconsistent UI Components

- Buttons have different shapes, colour, sizes
- Icons don't match style
- No reusable components
- No design system followed

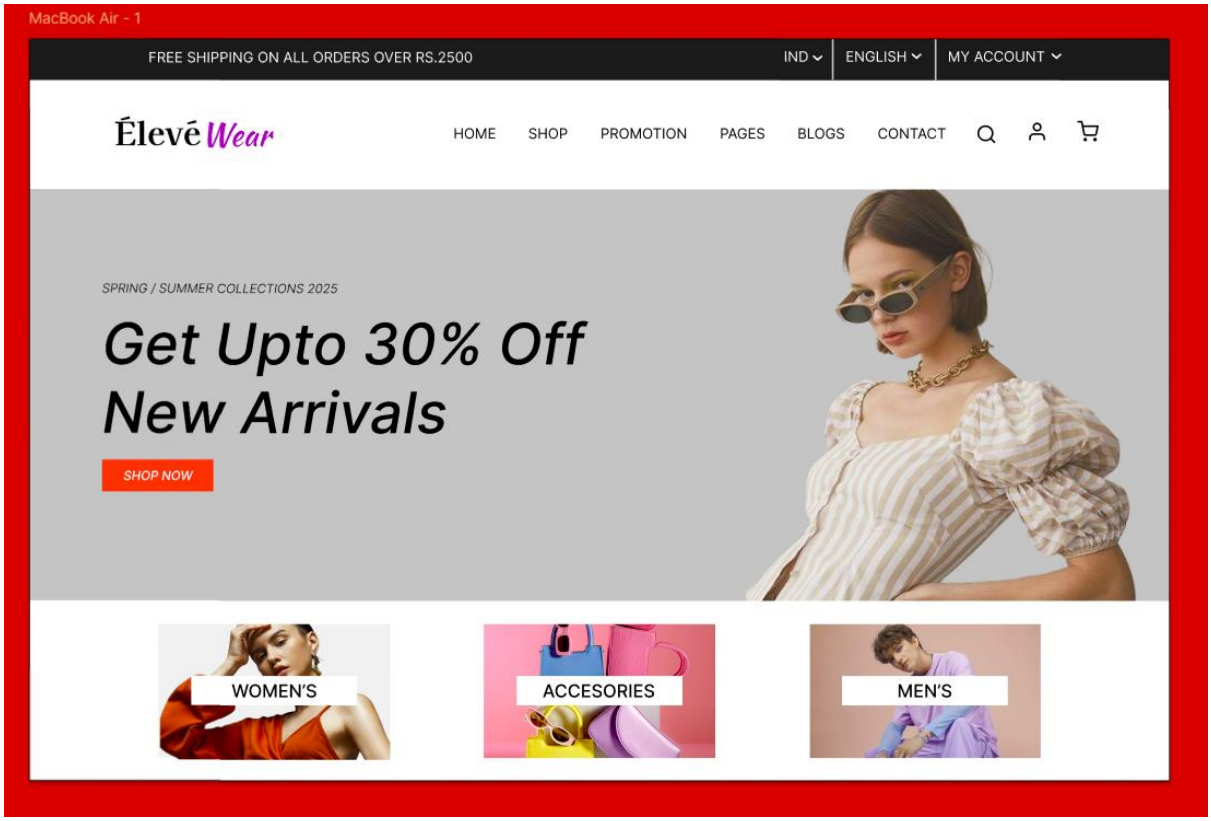
Violates: Consistency & design systems

9. Poor User Flow

- User journey is unclear:
  - Is this a landing page?
  - Is it a signup form?

- Is it an ad page?
- No clear primary action
  Violates: User flow & task clarity

GOOD DESIGN



WHY THIS IS A GOOD DESIGN:

1. Clear Purpose & Message

   The page immediately communicates:
   - What it is: a fashion e-commerce website
   - What's happening: *"Get Upto 30% Off New Arrivals"*
   - What to do next: *"Shop Now"*
     There is zero confusion for the user.

2. Strong Visual Hierarchy

The design guides the user's eyes naturally:

1. Brand logo (top left)
2. Main headline (large, bold text)
3. CTA button (bright orange)
4. Category cards (Women's, Accessories, Men's)

Size, spacing, and contrast are used correctly to show importance.

3. Balanced Layout & Composition

- Text on the left, product image on the right
- Clean horizontal alignment
- Proper margins and padding

This balance makes the layout feel organized, professional, and premium.

4. Consistent & Pleasant Colour Palette

- Neutral background (white & light grey)
- Accent colour (orange) used only for CTA
- Brand colour used subtly in logo

This avoids visual noise and improves focus and readability.

5. Readable Typography

- Clear distinction between headings and body text
- Good font size and line spacing
- No unnecessary font styles

Typography supports the content instead of distracting from it.

6. Intuitive Navigation

- Standard menu items (Home, Shop, Promotion, Contact)
- Familiar icons for search, account, and cart
- Language and account options placed neatly at the top

Users don't have to learn the interface — it's familiar.

7. Effective Call-to-Action

- "SHOP NOW" is:
    - High contrast
    - Clearly visible
    - Placed near the main message

This improves conversion rate.

8. Clear Product Categorization

The three category cards:

- Use high-quality images

- Have clear labels
- Are evenly spaced
  This helps users quickly navigate to what they want.

9. Proper Use of White Space

- Elements are not overcrowded
- Sections are visually separated
- Improves scannability
  White space makes the design feel modern and easy to use.
